**SAT 19:00 The Blue Planet (b00818zy)**  
Frozen Seas

A look at the survival techniques of creatures that endure the harsh conditions of the Arctic and Antarctic. For animals at both poles, life is dominated by the annual retreat and advance of the freezing sea ice and the challenge of surviving winters when temperatures drop.

In the Arctic the polar bear is the top predator, catching seals on the ice and forcing seabirds to nest high up on cliffs. In Antarctica the flightless penguins have no ground-based predators to deal with but lurking in the water is the constant threat from leopard seals.

Narrated by David Attenborough.

**SUN 23:35 The Rattigan Enigma by Benedict Cumberbatch (b012tnf0)**  
Benedict Cumberbatch, one of the country's leading actors, explores the life and work of enigmatic playwright Terence Rattigan.

Rattigan was the master of the 'well crafted play' of upper class manners and repressed sexuality and he dominated the West End theatre scene throughout the 40s and early 50s. But then, in the mid fifties 'the angry young man arrived'; a wave of young playwrights and directors who introduced a new, radical style of theatre. Rattigan's work faced a critical onslaught and he fell completely out of fashion. But now, in his centenary year his plays are enjoying a huge revival.

But Rattigan himself remains an enigmatic figure - a troubled homosexual whose polite, restrained dramas confronted the very issues - sexual frustration, failed relationships, adultery and even suicide - that he found so difficult to deal with in his own life. He had a gift for commercial theatre but yearned to be taken seriously as a playwright.

In this film Benedict re-visits his old school Harrow where Rattigan was also educated and was first inspired to write plays. He takes a trip down memory lane with one of Rattigan's closest friends (Princess Jean Galzine) and he talks to playwrights, critics and directors about what it is about Rattigan's work which we find so appealing today.

**MON 20:00 Camera That Changed the World (b012tnml)**  
The summer of 1960 was a critical moment in the history of film, when the fly-on-the-wall documentary was born. The Camera that Changed the World tells the story of the filmmakers and ingenious engineers who led this revolution by building the first hand-held cameras that followed real life as it happened. By amazing co-incidence, there were two separate groups of them - one on each side of the Atlantic.

In the US, the pioneers used their new camera to make Primary, a compelling portrait of American politics. They followed a then little known John F Kennedy as he began his long campaign for the presidency. Meanwhile, in France, another new camera was inspiring an influential experiment in documentary filmmaking. Chronique d'un Ete captures the real lives of ordinary Parisians across the summer of 1960. Both these extraordinary films smashed existing conventions as handheld cameras followed the action across public spheres into intimate and previously hidden worlds.

In The Camera that Changed the World this remarkable story is told by the pioneers themselves, some of whom, such as DA Pennebaker and Al Maysles are now filmmaking legends. Back in 1960, they were determined young revolutionaries.

**MON 21:00 Great Thinkers: In Their Own Words (b012z69b)**  
Human, All Too Human

The 20th century was a time of unprecedented change and conflict. Violence and war spread across Europe and the world, and as new technology trumped old it became possible to harm others on a previously unimaginable scale.

In this turbulent age, a new breed of thinker emerged who would examine what drives humanity. And the advent of television gave psychologists and scientists the chance to preach their ideas to the world

This programme mines the BBC archive to hear the great minds of the 20th century in their own words - the likes of Sigmund Freud, Margaret Mead, BF Skinner, Benjamin Spock and Richard Dawkins. The film also reveals some unseen gems, such as unseen footage from Panorama of the psychologist Carl Jung discussing his torturous relationship with Professor Freud.

Featuring contributions from modern-day scientists such as evolutionary biologist Professor Armand Leroi, broadcasting legend Sir David Attenborough and psychologist Oliver James, this is a unique opportunity to hear some of the most famous thinkers of our times.

**MON 22:00 Hawking (b0078pzf)**

**MON 23:30 Horizon (b0078y7h)**  
2005-2006

The Hawking Paradox

Series exploring topical scientific issues examines Professor Stephen Hawking's most controversial theory and possibly his greatest mistake.

For 30 years the most famous scientist in the world defended an extraordinary idea, an idea some claimed would undermine the whole of science. It was called the information paradox and it led one opponent to dub Hawking 'the most stubborn man in the universe'. But finally Hawking had to admit that he'd been wrong all along. Now, as he nears the end of his extraordinary career, Hawking's scientific legacy is being called into question like never before.

For a year Horizon filmed behind the scenes with Hawking as he struggled to finish what many thought was going to be his last scientific paper. If he succeeded he would potentially end his career on a high, confirming his status as one of the great figures in physics. But the odds were against him, as his physical health continued to decline.

This is an extraordinary story of one man's defiance of disability and his peers. It is a story that ranges from the beginning of the universe, which Hawking explored, to the intensive care unit of Addenbrookes, where he was taken and was critically ill for three months. On his hospital bed he had an insight which he hoped would form the basis of his latest comeback.

**MON 00:20 Lost Horizons: The Big Bang (b00dcbqm)**

Professor Jim Al Khalili delves into over 50 years of the BBC science archive to tell the story behind the emergence of one of the greatest theories of modern science, the Big Bang.

The remarkable idea that our universe simply began from nothing has not always been accepted with the conviction it is today and, from fiercely disputed leftfield beginnings, took the best part of the 20th century to emerge as the triumphant explanation of how the universe began. Using curious horn-shaped antennas, U-2 spy planes, satellites and particle accelerators, scientists have slowly pieced together the cosmological jigsaw, and this documentary charts the overwhelming evidence for a universe created by a Big Bang.

Series 1

In Search of the Real Scotland

Paul Murton follows in the footsteps of the first tourists to Scotland. With a Victorian guidebook in his hands, he travels across the country tracing the changes that have taken place since the birth of Scottish tourism 200 years ago.

Paul boards the Jacobite steamtrain, and star of the Harry Potter movies, to make one of the worlds most famous railways journeys and goes 'in search of the real Scotland'.

For centuries, outsiders had seldom visited the beautiful landscape of the west coast, but the power of steam changed everything. Within a century, a network of railways spread across the entire country, connecting the industrial cities of the south to the mountains and glens of the north. With the trains came the tourists - all clamouring for a piece of the real Scotland.

Paul's route starts at the foot of Ben Nevis in Fort William and continues along the beautiful railway line to Mallaig and onwards to the fabled Isle of Skye.

**TUE 20:00 The Story of Maths (b00f7zsk)**  
To Infinity and Beyond

Marcus du Sautoy concludes his investigation into the history of mathematics with a look at some of the great unsolved problems that confronted mathematicians in the 20th century.

After exploring Georg Cantor's work on infinity and Henri Poincare's work on chaos theory, he looks at how mathematics was itself thrown into chaos by the discoveries of Kurt Godel, who showed that the unknowable is an integral part of maths, and Paul Cohen, who established that there were several different sorts of mathematics in which conflicting answers to the same question were possible.

He concludes his journey by considering the great unsolved problems of mathematics today, including the Riemann Hypothesis, a conjecture about the distribution of prime numbers. A million-dollar prize and a place in the history books await anyone who can prove Riemann's theorem.

**TUE 21:00 Timeshift (b012zmy7)**

All the Fun of the Fair

From the sideshows, the freak shows and early hand-powered rides to the arrival of steam and electricity, the story of fairs is the tale of one of our first forms of popular entertainment.

The film shows how fairgrounds often provided the only entertainment to rapidly expanding industrial towns. It looks at how, from the 50s, the fairground was the site of youth rebellion, and why we are still entranced by these travelling carnivals that arrive overnight and then vanish just as mysteriously.

**WED 21:00 My Resignation (b0132xlg)**

Through personal testimony, this programme follows the process of resigning: from the initial crisis to taking the decision to resign and handling the timing, to the costs, consequences and legacy of the resignation.

It shows that the honourable resignation is not dead. In all walks of life people grappling with moral issues still take that decision to resign. Consultant anaesthetist Stephen Bolsin felt he could only go public after he had resigned and left the country. Former home secretary Jacqui Smith was determined to do the honourable thing and resign immediately over her expenses, but she was thwarted by a prime minister with any eye on political timing. The honourable resignations of Lord Carrington and Richard Luce were put back on track by a hostile parliament and press.

The programme charts how resignation can act as a social barometer - affairs that were once a fast route to leaving are no longer a career fullstop. Max Mosley talks frankly about how determined he was not to bow to pressure to go after revelations over his extra-marital sex.

Interviewees talk about their experiences and what they have learned. Alastair Campbell describes almost 'lamping' demonstrators outside his house. Greg Dyke can't sleep after his resignation 'deal' with the BBC governors goes wrong. Daily Star journalist Richard Peppiatt is plunged into depression after his plan to publish his resignation letter in the Guardian falls apart.

My Resignation shows that however society changes, resigning remains a personal and often traumatic journey.
